## Saltease

### A Wonderful Tasting Sodium Solution Has Arrived!

The 2005 Dietary Guidelines for Americans recommends that most adults (those with high blood pressure, those middle-aged or older, and/or African Americans) should limit sodium intake to 1500 mg per day. All other adults are recommended to consume less than 2300 mg of sodium per day.

Studies show that on average U.S. adults consume more than 3400 mg sodium per day. The consumer perception is largely that reduced sodium foods are inferior in flavor to the fully salted options, until now.

Saltease is a sodium reduction alternative that offers a solution to meet consumer demand for lower-sodium foods. With Saltease you can:

- Reduce sodium in formulations by up to 40%
- Provide the same great flavor of salt
- Eliminate the typical bitterness or aftertaste usually associated with potassium chloride
- Easy to incorporate into existing formulations at a 1:1 replacement basis with salt

Saltease is allergen free and contains no artificial flavor or enhancers.
